Skills

Full Stack Development

- Developed both frontend and backend software to implement a functional web application.
- Knowledge of programming languages such as TypeScript, JavaScript, Java, C++, C#, Swift, and Python.
- Experience with backend frameworks such as Express.js and Symfony, and frontend single-page application frameworks such as ReactJS and Vue.js.
- Maintained the integrity of the application by creating and passing software tests.

Agile Development:

- Developed applications using the agile development method, including the use of the Model-view-controller (MVC) software design patterns.
- Worked as a team to complete application goals by aiding team members in problem solving and stepping up as team leader when the group is directionless.

Student Experience

Full Stack developer | zu, Saskatchewan Polytechnic | 2024 – 2025

- Created a web application with other students for industry clients located at zu in Saskatoon, including a functional user-friendly frontend and a secure backend server and database.

Education

Computer Systems Technology diploma | Saskatchewan Polytechnic | 2023–2025

- The IT Development Project and the IT Development Project Management courses paired students with clients in industry to create a custom application.
- Advanced Programming and Advanced Mobile Application Programming taught students a variety of languages and platforms for application development.

Associate Information Technology Professional (AITP) | Canadian Information Processing Society (CIPS)| 2025

- Accredited upon completion of the Computer Systems Technology program at Saskatchewan Polytechnic.
